

FEDERAL POLYTECHNIC MUBI
DEPARTMENT OF ACCOUNTANCY

COURSE CODE: ACC 111
COURSE TITLE: PRINCIPLES OF
ACCOUNT

BY

MR. ADEBAYO D. YESUF

NATURE AND INTRODUCTION TO ACCOUNTING

Irrespective of the manner in which business organizations have evolved, one factor has remained constant and that is the need for book-keeping (that is, the recording of business transactions in an orderly manner) in order to, among others, **measures** the value of resources employed and the profitability (or otherwise) of the business venture. Various forms of recording existed, ranging from situations in which virtually no records were kept to **single-entry systems, double-entry and computerized system**. The most elaborate system of book-keeping which shows the complete effect of every transaction is the 'double-entry system'. This system was developed by Italian merchants who had begun to use it as early as the first half of the 14th century while business in the rest of Europe was recorded using 'single-entry system'. More than in any other part of the world, Europe being the most developed continent, witnessed a boom in industrial and business activities and Italian merchants, at that time, were the most widely-travelled businessmen; their business activities taking them across Europe and beyond.

The accounts of **steward's of commune of Genoa**, a city in Italy, for the year 1340 are reputed to be the earliest set of double-entry records. Of course, as they traversed Europe in their business activities, Italian merchants compared notes with their counterparts in other countries who accepted the superiority of the 'double-entry system' – which, at that time, was aptly dubbed the **Italian method** – to the system they had been using. By this means the 'double-entry system' gradually spread to the rest of Europe and the world.

The spread of the system was accelerated with the publication, in 1494, of the first known text on 'double-entry system' of book-keeping, by an Italian monk, **Luca Pacioli**, who was an erudite scholar of his time. Of course, the title of the book is in Italian language but, translated into English. It means “**Everything about Arithmetic, Geometry and Proportion.**” It has to be stated that the book was not all about double-entry book-keeping, as only one chapter dealt with double-entry book-keeping. The chapter was, however, so popular among students that ten years later, in 1504, Luca published it as a separate book whose title, translated into English, was **The Perfect SCHOOL OF MERCHANTS**

The influence of Italy on the accounting profession has dwindled in modern times, almost to the point of insignificance. Much of the current thinking in the profession is mainly dictated by two countries — the United Kingdom (UK) and the United States of America (USA).

DEFINITION OF ACCOUNTING

Accounting is the systematic process of recording, summarizing, analyzing, and reporting financial transactions and information of an organization, enabling stakeholders to make informed decisions about its financial health and performance.

WHAT IS BOOKKEEPING

Bookkeeping is the process of systematically recording, classifying, and organizing financial transactions and information related to a business or organization. It is a fundamental aspect of accounting and serves as the foundation for the preparation of financial statements and the overall management of a company's financial data

IMPORTANCE OF ACCOUNTING TO BUSINESSES

Accounting plays a crucial role in various aspects of business, finance, and the economy. Its importance can be summarized in the following key points:

1. **Financial Record Keeping:** Accounting helps in maintaining accurate and systematic records of financial transactions, making it easier to track income, expenses, assets, and

liabilities.

2. **Financial Decision-Making:** It provides essential financial information to businesses and individuals, aiding in making informed decisions related to investments, budgets, and resource allocation.
3. **Compliance with Regulations:** Accounting ensures that organizations adhere to legal and regulatory requirements, including tax laws, financial reporting standards, and industry-specific regulations.
4. **Transparency and Accountability:** Proper accounting practices promote transparency and accountability, allowing stakeholders to assess the financial health and integrity of an organization.
5. **Performance Evaluation:** Financial statements generated through accounting help in evaluating a company's performance, profitability, and overall financial health.
6. **Resource Allocation:** Effective allocation of resources is possible through budgeting, which is based on accounting information. This ensures that resources are utilized efficiently and cost-effectively.
7. **Credibility and Trust:** Accurate accounting builds credibility and trust with stakeholders, such as shareholders, creditors, suppliers, and customers.
8. **Risk Management:** Accounting aids in identifying financial risks and developing strategies to mitigate them, contributing to the long-term sustainability of an organization.
9. **Performance Measurement:** Key performance indicators (KPIs) derived from financial data help organizations measure their success and progress toward their goals.

USERS OF ACCOUNTING INFORMATION

Financial information is a crucial aspect of a business, and it serves a wide range of users who rely on this data for various purposes. The primary users of financial information include:

- **Management:** Business owners, executives, and managers use financial information to make informed decisions about the company's operations, performance, and future strategies. They may analyze financial statements, budget reports, and other financial data to assess profitability, manage costs, and plan for growth.
- **Investors and Shareholders:** Individuals who have invested in the company, whether through purchasing shares of stock or providing loans, rely on financial information to assess the company's financial health and performance. They use this information to make investment decisions and evaluate the potential for returns.
- **Creditors and Lenders:** Banks, financial institutions, and other creditors use financial statements and credit reports to evaluate a company's creditworthiness before extending loans or lines of credit. The financial information helps them assess the risk associated with lending money to the business.
- **Regulators and Government Authorities:** Government agencies and regulatory bodies require businesses to provide financial information for tax purposes and to ensure compliance with laws and regulations. They use this data to assess tax liabilities, enforce financial reporting standards, and monitor industry-specific regulations.
- **Employees:** Employees may be interested in the financial stability of their employer. They use financial information to assess job security, evaluate compensation packages, and understand the company's ability to invest in employee benefits, salaries, and growth opportunities.
- **Customers:** Customers may want to assess the financial stability of the companies they do business with. They may examine financial data to gauge the company's ability to

deliver products or services reliably and to fulfill warranties or guarantees.

- **Suppliers:** Suppliers may use financial information to assess the creditworthiness of their customers. This can impact credit terms, such as the length of time to pay invoices or the extension of trade credit.
- **Competitors:** Competing businesses may analyze the financial statements and reports of their rivals to gain insights into their performance, strategies, and market positioning. This information can help competitors make informed strategic decisions.
- **Analysts and Financial Advisors:** Financial analysts, consultants, and advisors use financial information to provide recommendations to their clients, such as investors and businesses. They conduct financial analysis to evaluate investment opportunities, assess mergers and acquisitions, and offer financial planning guidance.
- **Auditors and Accountants:** Auditors and accountants play a critical role in reviewing and verifying financial information for accuracy and compliance. They ensure that financial statements are prepared in accordance with accounting standards and laws.
- **Stakeholders and the Public:** Other stakeholders, such as nonprofit organizations, community members, and the general public, may have an interest in the financial information of businesses, especially if they are affected by the company's operations or policies

WHO IS AN ACCOUNTANT

An accountant is a person who has undergone a formal or professional training in the process of accounting and who belongs to at least one of the recognized professional accountancy bodies such as the Institution of Chartered Accountants of Nigeria (ICAN) and Association of National Accountants of Nigeria (ANAN).

ROLES OF ACCOUNTANTS

Accountants play several key roles in organizations, supporting financial stability, compliance, and strategic planning. Accountants are essential for both daily financial operations and long-term strategic planning, ensuring that organizations maintain financial integrity, meet regulatory obligations, and achieve financial objectives.

Here are some of the primary roles of accountants:

1. **Financial Reporting and Preparation of Financial Statements:** Accountants prepare accurate financial statements, including balance sheets, income statements, and cash flow statements. These documents provide insight into a company's financial health, helping stakeholders, such as investors and regulators, understand performance and make informed decisions.
2. **Budgeting and Financial Planning:** Accountants develop budgets and financial forecasts to help organizations manage resources effectively. By projecting future revenues, expenses, and cash flows, they support management in planning for growth, reducing costs, and making strategic investment decisions.
3. **Tax Compliance and Planning:** Accountants ensure that organizations comply with tax regulations by preparing and filing tax returns and staying updated on tax laws. They also offer tax planning strategies to minimize tax liabilities while ensuring compliance, which can lead to significant cost savings.
4. **Auditing and Assurance:** Internal and external auditors verify the accuracy of financial records and assess internal controls to identify potential areas of fraud or

inefficiencies. By conducting audits, accountants help organizations improve transparency, build credibility, and identify areas for process improvement.

5. **Cost Management and Cost Accounting:** Cost accountants analyze production costs, assess cost control measures, and provide insights into pricing and profitability. This role helps companies understand and reduce costs, maximize profits, and optimize resource allocation.
6. **Forensic Accounting and Fraud Detection:** Forensic accountants investigate financial discrepancies, detect fraud, and gather evidence for legal proceedings. This role is especially important in maintaining the integrity of financial systems and protecting assets from fraud and mismanagement.
7. **Risk Management and Internal Controls:** Accountants assess financial risks and develop internal controls to mitigate them. They work on setting up safeguards within an organization's financial system to prevent errors and fraud, ensuring that financial practices are sound and secure.
8. **Management Accounting and Decision Support:** Management accountants provide financial data and analysis for internal decision-making. By analyzing financial performance metrics, they guide management on strategic decisions like expansion, cost reduction, and product development, which are critical for long-term growth.
9. **Compliance and Regulatory Advisory:** Accountants ensure that companies adhere to industry-specific regulations and accounting standards. They keep up with changes in accounting laws and provide advice on maintaining compliance, which is essential to avoid penalties and maintain operational legitimacy.
10. **Financial Analysis and Reporting to Stakeholders:** Accountants analyze financial data to produce reports for stakeholders, including shareholders, creditors, and board members. These reports communicate financial performance, helping stakeholders make decisions regarding their investments and support for the company.

ACCOUNTING PRINCIPLES, CONCEPTS AND CONVENTIONS

Principles in accounting refer to the fundamental guidelines and concepts that govern the practice of accounting. These principles are established to ensure consistency, accuracy, and reliability in financial reporting. They provide a framework for recording, measuring, and presenting financial information. The principles of accounting serve as a foundation for the development of accounting standards and practices.

ACCOUNTING CONCEPT AND CONVENTION

Accounting concepts and conventions are fundamental principles and guidelines that form the basis for accounting practices and the preparation of financial statements. They provide a framework for how financial transactions should be recorded, reported, and interpreted. Here are some of the key accounting concepts and conventions:

Accounting Concepts:

1. **Entity Concept:** This concept asserts that a business is a separate entity from its owners, and its financial transactions should be recorded and reported independently.
2. **Going Concern Concept:** It assumes that a business will continue to operate indefinitely, allowing financial statements to be prepared with the assumption that the business will not be liquidated in the near future.
3. **Money Measurement Concept:** Only transactions that can be expressed in monetary terms should be recorded in the financial statements. Non-monetary events are typically not recorded.

4. **Accrual Concept:** Under this concept, revenues and expenses are recognized when they are earned or incurred, regardless of when the cash is received or paid. This concept is crucial for matching revenues and expenses.
5. **Consistency Concept:** It emphasizes the importance of using consistent accounting methods and practices from one period to another, ensuring that financial statements can be compared over time.
6. **Materiality Concept:** This concept suggests that only significant items should be reported in the financial statements. Trivial items can be omitted.
7. **Conservatism (Prudence) Concept:** This concept advises accountants to be cautious when recognizing revenues and to be more liberal when recognizing expenses. It's based on the idea of not overstating assets or income.

Accounting Conventions:

1. **Historical Cost Convention:** Assets are typically recorded at their original cost, which may not reflect their current market values.
2. **Consistency Convention:** This convention states that once an accounting method is chosen, it should be consistently applied over time, unless a significant reason for change exists.
3. **Full Disclosure Convention:** It requires that all significant information that could affect the decision-making of users of financial statements should be disclosed in the notes to the financial statements.
4. **Materiality Convention:** This convention suggests that immaterial items need not be strictly adhered to in the financial statements, allowing for practicality in reporting.
5. **Objectivity (Verifiability) Convention:** Financial transactions and events should be supported by objective evidence, making them verifiable by independent parties.
6. **Dual Aspect (Double Entry) Convention:** Every transaction has two sides – a debit and a credit – and these must be recorded to maintain the accounting equation ($\text{Assets} = \text{Liabilities} + \text{Equity}$) in balance.
7. **Matching Convention:** Revenues should be matched with the expenses incurred to generate them, ensuring that the income statement accurately reflects the results of operations.
8. **Time Period (Accounting Period) Convention:** It divides the financial life of a company into distinct and manageable periods (e.g., fiscal year, quarter) for reporting and analysis.

These accounting concepts and conventions serve as the foundation for the preparation of financial statements and help ensure that financial information is presented accurately, consistently, and fairly, allowing stakeholders to make informed decisions.

CAPITAL AND REVENUE EXPENDITURES

Capital expenditure

This is an expenditure from which the business entity will derive benefits for more than one year. The item or resource acquired with this expenditure will be held and used by the organization for years. Example for which are; cost of acquiring new vehicles, cost of buying new machineries, buildings etc.

It can also be said that Capital Expenditure refers to the funds spent by a business to acquire, upgrade, or extend its long-term assets, such as property, plant, equipment, and intangible assets. Capital expenditures are investments made to improve or expand a company's productive capacity and are expected to provide benefits over multiple accounting periods.

They are typically recorded as assets on the balance sheet and are subject to depreciation or amortization over their useful life. Common examples of capital expenditures include purchasing machinery, buying a new building, or acquiring intellectual property rights.

Revenue expenditure

This is an expenditure, the full benefit of which are used up within one year. It is charged to the statement of profit or loss as an expense in the year that it is incurred. Examples are buying of office stationaries, fueling of the office vehicles and generators, paying of salaries and wages etc.

It can also be said that it is the costs incurred by a business to maintain its ongoing operations, generate revenue, and meet day-to-day expenses. These expenditures are considered regular business expenses and are expected to provide benefits in the current accounting period. Unlike capital expenditures, revenue expenditures are fully expensed in the period in which they are incurred and are recorded on the income statement as operating expenses. Common examples of revenue expenditures include utility bills, salaries, advertising expenses, and maintenance costs.

KEY DIFFERENCES BETWEEN CAPITAL EXAMPLE AND REVENUE EXPENDITURE

1. Purpose:

Capital Expenditure: CapEx is incurred to acquire or improve long-term assets, which are expected to provide benefits over an extended period.

Revenue Expenditure: RevEx is incurred to cover day-to-day operational expenses and maintain the ongoing business operations.

2. Accounting Treatment:

Capital Expenditure: CapEx is capitalized and recorded as an asset on the balance sheet. It is gradually expensed through depreciation or amortization over its useful life.

Revenue Expenditure: RevEx is fully expensed in the period in which it is incurred and is recorded on the income statement as an operating expense.

3. Duration of Benefits:

Capital Expenditure: CapEx provides benefits over multiple accounting periods and contributes to the long-term growth and productivity of the business.

Revenue Expenditure: RevEx provides immediate benefits in the current period but does not contribute to long-term asset value.

Examples:

Capital Expenditure: Examples include the purchase of a new factory, construction of a new office building, acquisition of a patent, or the installation of expensive machinery.

Revenue Expenditure: Examples include rent, utilities, employee salaries, office supplies, advertising expenses, and routine maintenance costs.

4. Impact on Financial Statements:

Capital Expenditure: CapEx impacts both the balance sheet (as an asset) and the income statement (through depreciation or amortization).

Revenue Expenditure: RevEx affects only the income statement as an immediate expense, reducing the net income.

EXAMPLES OF CAPITAL AND REVENUE EXPENDITURE IN ANY ORGANIZATION OR BUSINESS

Category	Capital Expenditure Examples	Revenue Expenditure Examples
Tangible Assets	- Purchase of a new building	- Rent for office space
	- Expansion of a production plant	- Lease payments for equipment
	- Installation of machinery	- Repair of office furniture
	- Purchase of vehicles	- Routine maintenance costs
Intangible Assets	- Acquisition of a patent	- Legal fees for a lawsuit
	- Development of a software	- Licensing fees for software
Upgrades & Improvements	- Renovation of office space	- Repair of a broken window
	- Replacing a roof	- Replacement of light bulbs
Business Expansion	- Purchase of another company	- Advertising and marketing
	- Construction of a new store	- Promotional expenses
Software Development	- Developing proprietary software	- Subscription fees for software
Research and Development	- Costs related to creating a new product	- Laboratory supplies

PRINCIPLES AND PRACTICE OF DOUBLE ENTRY

Transactions in accounting are usually recorded or posted to ledger accounts in line with the **double entry principle**. This principle requires that dual or double effect of every transaction should be recorded by posting a debit entry to one account and a corresponding credit entry to another account. This is why it is said that “*for every debit entry, there must be a corresponding credit entry and vice-versa*”. It is the foundation for all accounting and book-keeping practice in any and all organization.

This principle operate on the theory that every financial transaction should have two entry to explain it. This two entries should be for the receiver (receiving account) and the giver (giving account).

RULES FOR DOUBLE ENTRY

Double entry is relatively easy to understand if the following **four** rules are kept in mind:

1. Double entry means that every transaction affects two things and should be entered twice: once on the **Debit** side and once on the **Credit** side.
2. The order in which the items are entered does not matter, it is easier to deal with any cash transaction first using **deposit** and **cheques**
3. A debit entry is always either an asset or an expense. A credit entry can be a liability, capital or income.
4. To increase or decrease assets, liabilities or capital, the double entry rules are as shown in Exhibit (3-1) and (3-2).

Rules of Debit and Credit

Account	To record	Entry in the account
Assets	↑ Increase ↓ Decrease	Debit Credit
Liabilities	↑ Increase ↓ Decrease	Credit Debit
Capital	↑ Increase ↓ Decrease	Credit Debit

ILLUSTRATIONS FOR THE PRINCIPLE OF DOUBLE ENTRY

Write up the following in the ledgers for Mr. Mkoko Business for the month of January, 2024

Jan 1, 2023: Cash sales to Taribo received by cash ₦25,000

Jan 2, 2023: Paid ₦450 cash for rent

Jan 3, 2023: Received refund of insurance ₦300 cash

Jan 4, 2023: Paid wages of ₦56,200 by cash

Jan 6, 2023: Cash sales ₦1,000

Jan 9, 2023: Purchases goods paying in cash ₦250

Jan 12, 2023: Received cheque from Rhoda ₦1,700

Jan 13, 2023: Received into bank account the money made from sales ₦27,500

Jan 14, 2023: Received the sum of ₦79,875 from A. Bola

Jan 15, 2023: Deposited ₦37,500 into the bank

Jan 18, 2023: Cheque received from Anthony ₦50,000

Jan 19, 2023: Paid salaries by cash ₦5,000

Jan 20, 2023: Paid Bashiru by cheque ₦80,000

Post the following transactions into the ledgers of Mr. Segun Odegbami

Jan 1, 2023 Started business with ₦15,000 in the bank and ₦8,750 in cash

Jan 2, 2023 Bought motor van by cheque ₦300

Jan 3, 2023	Withdrew cash ₦500 from the bank for business use
Jan 5, 2023	Received commission in cash ₦3,000
Jan 7, 2023	Paid rent in cash ₦1,200
Jan 8, 2023	Paid electricity bill ₦1,000 by cash
Jan 9, 2023	Cash sales ₦10,000
Jan 11, 2023	Cash purchase ₦15,000
Jan 15, 2023	Paid wages by cash ₦21,000
Jan 16, 2023	Sold goods on credit ₦780 to Emmanuel
Jan 17, 2023	Bought goods ₦1,500 on credit from Victor Enterprise
Jan 19, 2023	Paid sundry expenses by cash ₦1,500
Jan 20, 2023	Took cash as drawings ₦5,000
Jan 21, 2023	Sold motor van and received cheque ₦150,000
Jan 25, 2023	Paid motor expenses by cheque ₦1,500
Jan 27, 2023	We returned goods to victor ₦900
Jan 28, 2023	Goods returned to us by Emmanuel ₦490
Jan 29, 2023	Collected a loan from Ogundele by cheque ₦100,000
Jan 30, 2023	Cash sales ₦1,070
Jan 31, 2023	Took cash ₦10,000 from bank for business use.

SUBSIDIARY BOOKS OF ACCOUNT AND SOURCE DOCUMENTS

SOURCE DOCUMENTS

Source documents are the foundational records that initiate and support financial transactions in accounting. They are the primary evidence of a business transaction and provide a clear and reliable record of the transaction's details.

Significance of Source Documents:

- i. **Evidence of Transactions:** Source documents serve as concrete proof that a transaction has occurred. They document the date, nature, and details of each financial event, making it easier to verify and track activities.
- ii. **Accuracy and Reliability:** These documents enhance the accuracy and reliability of accounting records. They provide a basis for cross-referencing and reconciling financial data.
- iii. **Audit Trail:** Source documents create an audit trail that can be followed to validate financial transactions. This is crucial for internal and external audits.
- iv. **Legal and Regulatory Compliance:** Many financial transactions need to comply with legal and regulatory requirements. Source documents ensure that all necessary information is available to meet these obligations.
- v. **Management Information:** Source documents provide valuable data for management decision-making. They offer insights into trends, patterns, and performance, aiding in strategic planning and control.

Types of Source Documents

- i. **Invoices:** Invoices are issued by suppliers to customers, indicating the sale of goods or services. They include details like the product or service description, quantity, price, terms of payment, and payment due date.
- ii. **Receipts:** Receipts are issued by a business to customers as proof of payment. They typically include details of the transaction, such as the date, amount paid, and the payment method.

- iii. **Purchase Orders (POs):** Purchase orders are issued by a buyer to a seller to formally request goods or services. They specify the items, quantities, prices, and delivery terms.
- iv. **Sales Orders:** Sales orders are generated by the seller in response to a purchase order. They confirm the sale and specify the terms of delivery, payment, and shipping.
- v. **Credit Notes:** A credit note, also known as a credit memo or credit memorandum, is a financial document issued by a seller or supplier to a buyer or customer. It is used to acknowledge that a credit is owed to the buyer due to a variety of reasons, including returns of goods, overpayments, price adjustments, or resolution of billing discrepancies
- vi. **Debit Notes:** A debit note is a financial document issued by a buyer or customer to a seller or supplier. It is used to request or acknowledge that additional payment is owed to the seller due to various reasons, such as the receipt of damaged or incomplete goods, pricing adjustments, or any other discrepancies in the original invoice. In essence, a debit note functions as a request to debit or increase the amount payable by the buyer to the seller.
- vii. **Bank Statements:** Bank statements show all financial transactions related to a bank account, including deposits, withdrawals, checks issued, and service charges.
- viii. **Payroll Records:** Payroll records include pay stubs, timecards, and other documents detailing employee compensation. They ensure employees are paid accurately and on time.
- ix. **Contracts and Agreements:** Legal agreements and contracts outline the terms and conditions of specific transactions or relationships, serving as a basis for financial entries.

SUBSIDIARY BOOKS

Subsidiary books of accounts, often referred to as "subsidiary ledgers" or "subsidiary records," are a vital component of a company's accounting system. They are designed to facilitate the recording of specific types of transactions in a more detailed and organized manner. Subsidiary books help streamline the accounting process, improve accuracy, and simplify the preparation of financial statements.

Types of Subsidiary Books

1. **Cash Book:** The cash book is a fundamental subsidiary book used to record all cash transactions, including cash receipts and cash payments. It is often divided into two sections: the cash receipts side and the cash payments side. This book helps in monitoring cash flow, ensuring that there is adequate cash on hand, and detecting any irregularities in cash handling
2. **Sales Day Book:** The sales book, also known as the sales daybook, is used to record all credit sales made by a business. It provides a detailed account of sales transactions, including the date, customer's name, invoice number, and the amount of the sale. This book aids in tracking sales revenue, analyzing customer accounts, and managing credit transactions.

Example:

Enter the following transactions of Femi and Sons Enterprise in the Sales Days Book for the month August 2023 and post to the relevant ledgers.

August 1, 2023	Sold to Roger Mila
	20 bags of sugar at ₦40 each
	12 plates at ₦140 each

August 7, 2023	Sold to Shorunmu 12 bags of cement at ₦45 each 5 packets of tea at ₦15 each Trade discount at 10%
August 13, 2023	Sold to Muibat 15 shoes at ₦65 each 100 packets shirts at ₦13 each Trade discounts at 5%

3. **Purchases Day Book:** The purchases book, also known as the purchases daybook, is used to record all credit purchases made by a business. It contains information about the supplier, date of purchase, invoice number, and the value of the purchases. This book simplifies the process of tracking expenses, managing accounts payable, and ensuring proper procurement procedures.

Example:

Write up the purchase journal of Femi & Son and post to the ledgers for the month of August, 2023

August 3, 2023	Bought from Coca Cola 12 crates of coke at ₦40 each 5 crates of Fanta at ₦120 each Trade discount of 20%
August 5, 2023	Bought from PZ Limited 140 bags of flour at ₦10 each 400 soaps at ₦2 each Subject to trade discount of 10%

4. **Sales Return Book and Purchases Return Book:** These subsidiary books are used to record returns of goods by customers (sales return book) and returns of goods to suppliers (purchases return book). They help in tracking the reasons for returns, managing inventory adjustments, and ensuring accurate accounting of returned goods.

Example:

Write up the returns outwards journals of Femi & Sons Ltd for the year ended 31st August, 2023 and post to the appropriate ledgers

August 15, 2023	Returned to Coca cola Limited 6 crates of coke at ₦240 each 1 crates of Fanta at ₦120 each Trade discount of 20%
August 21, 2023	Returned to PZ Limited 14 bags of flour at ₦10 each 40 soaps at ₦2 each Trade discount at 10%

Write up the returns inward book of Femi and Sons for the month of August, 2023 and post to the appropriate ledgers.

August 14, 2023	Goods returned from Roger Milla 1 bag of sugar at ₦40 each 3 plates at ₦140 each
August 17, 2023	Returned from Muibat

3 shoes at ₦65 each
 2 packet shirts at ₦13 each
 Trade discount at 5%

5. Journal proper or General journal: This is another book of prime entry in which are recorded the initial entries in chronological order. It can equally be define as the daily records of transactions. It is used for opening entries, corrections of errors, etc. This will be treated later in the book.

SIGNIFICANCE OF SUBSIDIARY BOOKS

- i. **Detailed Recording:** Subsidiary books provide a more detailed record of specific types of transactions, which is essential for accurate financial reporting.
- ii. **Efficiency:** They streamline the accounting process by segregating different types of transactions into specialized books, making it easier to record and retrieve information.
- iii. **Error Detection:** Subsidiary books help in identifying errors and discrepancies in transactions, ensuring that the accounts remain accurate.
- iv. **Improved Financial Analysis:** By maintaining detailed records, businesses can analyze their financial performance more effectively and make informed decisions.
- v. **Compliance:** They aid in compliance with taxation and regulatory requirements, as they provide a clear trail of transactions.
- vi. **Audit Trail:** Subsidiary books create a reliable audit trail, facilitating internal and external audits.

THE PRINCIPAL BOOK OF ACCOUNT: LEDGER

A ledger is a fundamental component of double-entry accounting and plays a crucial role in organizing, summarizing, and maintaining a detailed record of a company's financial transactions. It is a book or an electronic system that keeps track of all financial transactions, both revenue and expenses, in a systematic and categorized manner. Ledgers help businesses and accountants maintain accurate financial records and produce financial statements.

TYPES OF LEDGERS

Ledgers can be classified into the following:

1. Personal ledger: These are the ledgers for credits and debtors accounts. Eg. Purchases and sales ledgers.
2. General ledgers: These are ledgers for real and nominal accounts eg. Expenses account, income account, sales accounts, purchase accounts and assets accounts.
3. Private Ledgers: Private ledgers are internal accounting records maintained by private companies and organizations for their own use. They are not intended for public disclosure, making them a confidential tool for managing financial information.
4. Purchase or Creditors Ledgers: The Purchase Ledger, also known as the Creditors Ledger, is a specialized accounting ledger that records transactions related to purchases and outstanding payments to suppliers and creditors. It includes details of supplier invoices, credit notes, and payments made to suppliers. The Purchase Ledger helps businesses keep track of their accounts payable, manage supplier relationships, and ensure timely payment of bills. It is crucial for maintaining good relationships with suppliers and managing cash flow effectively.
5. Sales or Debtors Ledgers: The Sales Ledger, also known as the Debtors Ledger, is a

specialized ledger that records all sales transactions made on credit, tracking the amounts owed by customers. It includes details of customer invoices, credit notes, and payments received from customers. The Sales Ledger assists businesses in managing accounts receivable, tracking customer balances, and ensuring timely collection of outstanding payments.

6. Nominal Ledger: The nominal ledger, also known as the general ledger, serves as the core accounting ledger in the double-entry accounting system. It records all financial transactions, categorizing them into nominal accounts, which include revenue and expenses. The nominal ledger helps businesses track and categorize income and expenses for financial reporting and analysis.

ILLUSTRATION

Modern Electric Incorporation is a retail company that sells electronics and appliances. They use a double-entry accounting system and maintain a general ledger to record their financial transactions for the month of March 2023. Below are the transactions for each day of the month. Prepare the general ledger accounts, ensuring you provide all necessary details for each transaction.

March 1: The Company received ₦15,000 in capital from its shareholders in exchange for equity.

March 2: Bought motor van by cheque ₦300

March 3: Withdrew cash ₦500 from the bank for business use

March 5: Received commission in cash ₦3,000

March 6: Paid rent in cash ₦12

March 8: Paid electricity bill ₦10 by cash

March 9: Cash sales ₦100

March 11: Cash purchases ₦150

March 15: Paid wages by cash ₦200

March 16: Sold goods on credit ₦1,000 to Ayo

March 17: Bought goods ₦150 on credit from Victor enterprise

March 19: Paid sundry expenses by cash ₦15

March 20: Took cash as drawings ₦50

March 21: Sold Gas cooker and received cheque ₦200

March 25: Paid motor expenses by cheque ₦15

March 27: We returned goods to victor ₦105

March 28: Goods returned to us by Ayo ₦25

March 29: Loan from Eunice by cheque ₦1,000

March 30: Cash sales ₦107

March 31: Took cash ₦10 from bank for business use

BALANCING OF LEDGER ACCOUNTS AND TRIAL BALANCE

The account must be balanced off before extracting the trial balance at regular intervals during the financial year. It is necessary to balance of the account at the end of each financial period in order to ascertain the financial stand or position of the company or organization.

PROCEDURE FOR BALANCING OF LEDGER ACCOUNTS

- i. Add all items on the debit side (Dr)
- ii. Add all the items on the credit side (Cr)
- iii. Compare both sides
- iv. Subtract the side with the higher amount from the side with the lower amount
- v. The difference of both sides should be added to the lower side to balance off the account

TRIAL BALANCE

A trial balance is a fundamental accounting report that provides a summary of the balances of all the general ledger accounts in a company's accounting system at a specific point in time. Its primary purpose is to ensure the accuracy of a company's financial records and to identify any potential errors or discrepancies in the double-entry accounting system.

USES OF TRIAL BALANCE

1. **Error Detection:** One of the primary purposes of a trial balance is to identify errors or discrepancies in the accounting records. If the debits and credits do not balance, it suggests that there may be errors in the ledger accounts, such as transposition errors, posting mistakes, or omissions. The trial balance helps accountants pinpoint and rectify these errors before preparing financial statements.
2. **Preparation of Financial Statements:** The trial balance serves as a foundation for preparing financial statements, such as the income statement and balance sheet. It provides the starting point for summarizing financial data in a structured format.

RULES OF TRIAL BALANCE

1. All assets must be put on the debit side
2. All liabilities must be on the credit side
3. All income or gain must be recorded on the credit side
4. All expenses must be recorded on the debit side

Illustration 1: Use the following transactions below to prepare a comprehensive trial balance after creating the relevant books of accounts.

Started business with P25 000 in bank and P2 500 in cash.

May 2 Bought goods on credit from: David P300.

May 3 Paid commission by cheque P500.

May 5 Bought motor Van on credit from Exim Motors P15 000.

May 6 Cash purchases P 250.
 May 15 Paid Exim Motors by cheque P15 000.
 May 16 Paid by cheque, David P150.
 May 18 Sold goods on credit to: Godfrey P300.
 May 19 We (Business) returned goods to David P50.
 May 24 Godfrey returned goods to us (Business) P25.
 May 25 Withdrew by cheque P500 and Goods (Inventory) costing P250 for personal use
 May 26 Received cheque from Godfrey P150.
 May 28 Received commission P 250 by cheque.
 May 30 Introduced additional capital by bringing in Office Equipment worth P5 000 to the business.
 May 31 Cash sales P200.

ILLUSTRATION

Emmanuel sets up a trading business, buying and selling goods. Record the following transactions which, occurred during his first month of trading (July 2013) in the relevant ledger accounts.

July 1: He introduced ₦500,000 into the business by paying money into a business bank account.

July 2: The business bought a motor van for ₦60,000. Payment was by cheque.

July 3: He bought some inventory for ₦1200,000, paying by cheque.

July 5: The inventory purchased was sold for ₦150,000 in cash.

July 7: Bought inventory from Ann T. for ₦350,000 on credit.

July 8: Purchased inventory for ₦120,000 on credit from James A.

July 9: He sold inventory for ₦80,000 were on credit to Akin G.

July 10: Akin G. returned inventory ₦5,000

July 11: Returned inventory to Ann T. ₦15,000

July 12: A payment of ₦40,000 was received from Akin G.

July 13: He withdrew ₦10,000 from the bank account for his personal use.

July 15: He paid ₦2,000 for diesel for the motor van using a business cheque

July 16: The business paid ₦15,000 by cheque for the premium on an insurance policy.

July 17: The business received a bank loan of ₦100,000, repayable in two years.

July 18: Paid of ₦325,000 was made to Ann T. by cash in full settlement.

July 20: Sold inventory ₦450,000 to Peter P. on credit

July 21: Bought inventory with selling price of ₦550,000, obtained trade discount of 2% and paid by cash.

July 22: Sold inventory by cash for ₦350,000.

July 24: Purchased furniture on credit from Mathew furniture ltd for ₦100,000 for the business.

You are required to:

- a) Post all transactions to ledger accounts.
- b) Close off each account and extract a trial balance.

ERRORS AND CORRECTION OF ERRORS IN TRIAL BALANCE

ERRORS

Due to the imperfection of human beings, it is inevitable that errors in recording transactions would exist in the accounting records. Errors cannot be eliminated completely; they can only be reduced to the barest minimum. To reduce errors in accounting records, what should be done, among other measures, is to engage the services of well trained personnel to maintain accounting records.

TYPES OF ERRORS

Errors are of two kinds:

- (a) Those which would not prevent the Trial Balance and Balance Sheet from balancing; and
- (b) Those which would cause the Trial Balance and Balance Sheet not to balance.

ERRORS NOT AFFECTING TRIAL BALANCE

Despite the existence of these errors, the trial balance would still agree. They consist of the

following:

ERROR OF ORIGINAL ENTRY

This is an error in which the value (amount) of a transaction is recorded wrongly at the beginning of the recording process that is, when the source document is being raised or when the source document is being posted to the appropriate subsidiary book. The wrong amount is then passed through the double-entry system. For example, a sum of ₦25,500 received from a customer may be written as ₦25,000 which is subsequently debited to the cash book and credited to the customer's account.

ERROR OF OMISSION

This is an error involving failure to post a transaction into the accounts, that is, no debit entry, and no credit entry. This may be due to the loss of the source document. For example, a purchase invoice may be misplaced as a result of which it was not recorded in the purchases day book causing the transaction not to be debited to purchases account nor credited to the supplier's account.

ERROR OF PRINCIPLE: This is an error whereby a transaction is posted to the wrong class of accounts. For example, the cost of an office air-conditioner may be wrongly debited to office expenses account [an account belonging to the class of **nominal** accounts] instead of office equipment account [an account belonging to the class of **real** accounts].

Error of Commission: This is an error involving the posting of a transaction to the correct class of accounts but the wrong account within that class. For example, payment to a creditor named Jane may be wrongly debited to the account of another creditor named Janet. Both names are almost identical in spelling and both accounts, of course, belong to the class of personal accounts.

ERROR OF COMPLETE REVERSAL ENTRY: This is an error involving the complete reversal of the normal double-entry for a transaction. For example, the payment by cheque for stationery may be wrongly debited to bank account and credited to stationery account.

COMPENSATING ERROR: This is a situation in which errors cancel each other out. For example, the undercast of the debit side of cash book by, say ₦20,000 would be cancelled out if, later, the total taken from sales day book and credited to sales account is understated by ₦20,000.

ERRORS AFFECTING TRIAL BALANCE

These are errors the existence of which would cause the Trial balance not to agree. They consist of the following:

CASTING ERROR: This is an error involving wrong addition of figures.

ERROR OF PARTIAL REVERSAL OF ENTRY: This is an error involving reversal of one leg of the double-entry for a transaction. For example, the double-entry for the payment of rent by cash is: debit rent account, credit cash account. If rent account is correctly debited but cash account is also debited, this amounts to an Error of partial reversal of entry – the reversal of the credit entry. This error always results in the two legs of a double-entry appearing on the same side. In the example stated, the double-entry appears on debit side. This is the reason why, in the entry to correct this error, the amount involved would be doubled.

OMISSION/MISSTATEMENT OF ACCOUNT BALANCE: This is the omission or misstatement of account(s) balances while drawing up a Trial balance.

POSTING ONLY ONE LEG OF A TRANSACTION: This is an error whereby one aspect of the double-entry for a transaction is posted without posting the corresponding opposite entry.

SUSPENSE ACCOUNT

When a Trial balance does not balance and there is no time or it is inconvenient to immediately locate and correct the errors because the final accounts are urgently required, the Trial balance can be made to balance by inserting the balancing figure and describing it as suspense

account.

If the Suspense account balance is a debit, it shall be classified as a current asset in the balance sheet while it shall be classified as a current liability if it is a credit balance. Suspense account must however not be carried in the books for an unreasonable length of time. As soon as possible, it should be eliminated. The only way Suspense account can be eliminated is to locate and correct the errors that necessitated its creation in the first place.

THE CASH BOOK

Cash book is a book for recording detailed particulars of all money received and paid. All cash transactions and transactions made by cheque (bank) must be recorded in the cash book and it should be noted that all transactions made on credit should not be recorded in this book as there do not meet the requirement. It serves as a subsidiary ledger to the general ledger, specifically focusing on cash-related activities. The primary purpose of a cash book is to maintain an accurate and organized record of all cash inflows and outflows, making it an essential tool for financial control and reporting.

TYPES OF CASHBOOK

1. Single column cashbook
2. Double column cashbook
3. Three column cashbook
4. Petty cash book

DOUBLE COLUMN CASHBOOK

In this type of cashbook, two separate accounts cash and bank are combined together for convenience purposes.

Date	Particulars	F	Cash (₦)	Bank (₦)	Date	Particulars	F	Cash (₦)	Bank (₦)
1/1/2023	Capital	-	xx	xx					

THREE COLUMN CASHBOOK

The three cashbook represents three accounts: cash, bank and discounts combined all into one account. It follows the same principle as the two column cashbook with the exception of the discount column which can be divided into discount allowed and discount received been introduced.

Date	Particulars	F	Discount allowed	Cash (₦)	Bank (₦)	Date	Particulars	F	Discount received	Cash (₦)	Bank (₦)
1/1/2023	Capital	-		Xx	xx						

ILLUSTRATIONS

1. On the 1st of April, 2023, Mr. Bootleg a business man, had ₦24, 375 as cash in hand and a balance of ₦468,900 in his bank account. The following are the transactions for

the month of April, 2023:

- April 3rd: Received the sum of ₦79,875 from A. Bola
- April 6th: Sum of ₦15,000 was received in cash from O. Kunle
- April 7th: Deposit ₦37,500 into the bank
- April 8th: Paid wages of ₦56,200 by cash
- April 13th: Paid BB Brothers account of ₦16,500
- April 15th: Laraba settled her account of ₦56,250
- April 19th: Received a cheque of ₦64,125 from Biodun
- April 20th: Paid tax office the sum of ₦5,065
- April 21st: Receive cash of ₦49,500 from Julius Chizea,
Paid wages of ₦56,250 in cash
- April 26th: Chukwu's account of ₦41,250 was settled by cheque
- April 27th: Received from Olu Samonda the sum of ₦106,875
- April 28th: Paid wages by cheque ₦56,250
Withdrew ₦3,750 by cheque for private use

You are required to write up a two column cashbook from the following details and balance off all ledgers as at the end of the month of April 2024

2. Bolanle started a small business with ₦80,000 on 2/1/2017 which he paid into a bank account for the business on the same date. His transactions for the rest of the month were as follows:

5 th Jan, 2017	purchases by cheque ₦27,300
6 th Jan, 2017	credit purchases ₦25,200 electricity paid by cheque ₦500; rent ₦700 by cheque
7 th Jan, 2017	drew cash for office use ₦1,200 sales: By cheque: ₦42,520 By cash: ₦480 On credit: ₦50,000
8 th Jan, 2017	paid payables by cheque ₦15,100 and received discount of ₦320
9 th Jan, 2017	cash sales ₦17,115; Cash wages paid ₦500
10 th Jan, 2017	paid into bank the sales made on 9/1/2017. Stationary bought by cash ₦50
12 th Jan, 2017	received from customers cheque for ₦39,200 and allowed discount of ₦800
15 th Jan, 2017	drew cash from bank for office use ₦200

16 th Jan, 2017	servicing and repairs by cash	₦120
	purchases: by cash	₦20,000
	: by cheques	₦5,000
	: on credit	₦45,000
20 th Jan, 2017	sales: by cash	₦37,500
	: by cheques	₦17,000
22 nd Jan, 2017	paid payables ₦27,900 by cheque and received discount of ₦100	
	cash sales ₦2,000 which was immediately lodged into the bank	
24 th Jan, 2017	payments by cheque:	
	rent	₦1,200
	rates	₦300
	wages	₦2,000
28 th Jan, 2017	salaries by cheque	₦3,600
30 th Jan, 2017	cash lodged into bank	₦10,000
31 st Jan, 2017	drew cheque for petty cash	₦200

Required: To prepare three column cash book for the month of January, 2017.

3. Mr. Ejiga commenced business on 1st January, 2018 by transferring ₦720,000 from his private current account into a bank account which he has opened for the business. His transaction for the month of January, 2018 were as follows:

	(₦)
Jan 1	bought goods on credit from Yakubu 120,000
Jan 2	withdrew cash from bank for office use 18,000
Jan 3	sold goods on credit to Dauda 150,000
Jan 4	bought goods on credit from Bashiru 180,000
Jan 6	sold goods to Okechukwu on credit 220,000
Jan 7	paid rent by cash 2,500
Jan 9	withdrew cash from office till for personal use 3,000
Jan 10	bought goods from Bemigho on credit 100,000
Jan 11	goods returned by dauda 17,000
Jan 12	sold goods on credit to Anthony 140,000
Jan 14	cash purchases from Ekpulu paid by cheque 40,000
Jan 15	goods returned to yakubu 8,200
Jan 15	cost of goods taken for private use 5,000
Jan 16	goods returned by Okechukwu 20,000
Jan 17	sold goods (normal selling price ₦20,000) to Akintolu giving trade discount of 10%
Jan 18	received cheque of ₦95,000 from Okechukwu after he deducted cash discount of 5%
Jan 20	purchased second-hand car from Mazamaza Motors by cheque 100,000

Jan 21	paid cheque to Yakubu in full settlement of his account	110,000
Jan 22	cash sales to Taribo received by cash	25,000
Jan 25	goods returned to Bemigho	5,000
Jan 26	purchased goods worth ₦70,000 on credit from Aminu at a trade discount of 10%	
Jan 27	paid cash of ₦18,000 to Bemigho after deducting discount of 10%	
Jan 29	received cash from Dauda in full settlement of his account	130,000
Jan 29	cheque received from Anthony	50,000
Jan 30	deposited cash into bank account	80,000
Jan 30	paid salaries by cash	5,000
Jan 31	withdrew cash from bank to pay his sons school fees	3,000
Jan 31	paid Bashiru by cheque	80,000

You are required to:

- i. Write up the 3 column cash book and other subsidiary books
- ii. Post the entries to the ledger accounts
- iii. Balance the accounts as at 31st January, 2018

PETTY CASHBOOK

A petty cashbook, also known as a petty cash ledger or petty cash register, is a financial record used by businesses to track small, day-to-day expenditures and manage a limited amount of cash kept on hand for miscellaneous and minor expenses. It serves as a subsidiary ledger to the main accounting system, helping to maintain transparency and accountability for small cash transactions that do not warrant the use of regular company funds or checks.

The conventional system for recording this small cash disbursement is called the Impress system. In this system, a specific sum is given to the petty cashier at the start of the accounting period. This specific sum is called float.

ADVANTAGES OF PETTY CASHBOOK

1. The risk of fraud will be eliminated
2. The burden of the main cashier will be reduced

ILLUSTRATION

Absad Enterprises uses an analysis petty cashbook with columns for Travelling, Postages, Stationary, Motor expenses, Cleaning, Ledger accounts. The petty cash system is based on an impress of ₦1,000 which will be replenished at the end of the month.

The following information was extracted from the books for the month of January 2023.

January	₦
1 st Petrol	40

3 rd	Postage stamps	15
4 th	One ream of typing paper	30
6 th	Segun- Settlement	150
7 th	Office cleaning materials	20
8 th	Travelling	40
10 th	Refund of a clerks bus fare	20
14 th	Car polish	30
16 th	Petrol and oil	70
18 th	Registered mail	20\
20 th	Office carpet shampoo	10
21 st	Petrol	70
25 th	Petrol	70
27 th	Brown-settlement of account	250
28 th	Smith –settlement of account	60
29 th	Carbon paper	40

Required:

1. Enter the above transactions into a suitable ruled petty cash book
2. Repletion of the impress.

THE JOURNAL

The journal is a book of original entries or prime entries which record transaction in chronological order (i.e the day to day recording of transactions arranged according to when something happens). Journals can also be referred to as a daily record into which transactions are entered and classified as Dr and Cr before there are posted to the ledgers. The journals has columns for date, particulars, folio, debit and credit. The entries are recorded and explained to give the nature of the transactions. This is referred to as narration.

ADVANTAGES OF JOURNAL

1. Its main purpose is to provide a convenient record of transactions in chronological order
2. Journal reduces the risk of omission of transactions
3. The explanations of the entries are made known by the journal

ILLUSTRATION

Enter the following transactions into their individual ledger:

1/9/23: Started business with capital in cash ₦3,000
 2/9/23: Paid rent by cash ₦70
 3/9/23: Received loan from Pablo ₦500 by cheque
 5/9/23: We paid Olu by cheque ₦165
 6/9/23: We paid general expenses in cash ₦300
 9/9/23: Withdrew ₦1,000 from cash till and paid it into the bank account
 10/9/23: Cash sales paid directly into the bank ₦3,000
 12/9/23: Banked cash ₦900
 14/9/23: Cash purchased ₦500
 16/9/23: Bought goods by cheque ₦130
 19/9/23: Commission received by cheque ₦501
 21/9/23: Bought motor van by cheque ₦60
 22/9/23: Cash drawings by the proprietor ₦21
 24/9/23: We paid Biodun for goods bought ₦250,
 ₦150 in cash and ₦100 by cheque
 26/9/23: Wages paid in cash ₦35
 27/9/23: Bought stationary by cash ₦75
 28/9/23: Withdrew ₦105 from bank for private use
 30/9/23: Rent received by cheque ₦45
 31/9/23: Cash sales ₦1,000

BANK RECONCILIATION STATEMENT

A business enterprise will record money paid into the bank and the sums drawn from the bank with cheques in the cash book. On the other hand the bank will record all the transactions in their own books. The book which the bank prepares showing the transactions between it and the customer is known as “**Bank statement**”. When there is a difference between the balances then there is need for reconciliation. Bank reconciliation statement can be defined as a statement that is prepared to reconcile the disagreement of the cash book and that of the bank statement. The reconciliation is needed in order to check the accuracy of the postings in the cash book by reconciling the balance of the cash book with that of the bank statement.

THE NEED AND IMPORTANCE OF BANK RECONCILIATION

The following are the factors which make bank reconciliation important:

1. The errors that might have taken place in the cash book in connection with bank transactions can be easily found
2. Regular preparation of bank reconciliation statement prevents frauds.
3. It indirectly imposes moral check on the accounting staff.
4. By the preparation of bank reconciliation statement, uncredited cheque can be

detected and steps can be taken for their collection.

5. It discloses any unauthorized cheque issued and cashed.
6. It reveals any lodgments not credited by the bank either by omission or commission.

REASONS FOR DISAGREEMENT BETWEEN THE CASHBOOK AND THE BANK STATEMENT

1. **Unpresented cheque:** This occurs when a company issues a check, deducts it from their cash book, but the recipient has not yet deposited or presented the check to the bank for payment. The cash book will show the reduced balance, but the bank statement won't reflect this deduction until the check is presented and cleared.
2. **Uncredited cheque:** If the company receives a check from a customer, records it in the cash book, but the bank has not yet credited the account, there's a discrepancy. The cash book will reflect the increased balance, but the bank statement won't show this until the bank processes and credits the amount.
3. **Dishonored cheque:** This occurs when a check issued by the company is deposited by the recipient but is not honored by the bank due to insufficient funds or other reasons. The company's cash book may have reduced the balance for the check, but if it's dishonored, the bank statement won't reflect this deduction. It might lead to a higher bank balance in the statement than in the cash book.
4. **Bank charges and interest:** Banks often impose charges for various services or deduct fees for overdrafts. Additionally, they may credit interest earned on accounts. These charges or interest will affect the bank balance but might not be recorded in the cash book, causing a difference between the two records.
5. **Standing order:** Standing orders are regular, fixed payments set up by the company to be paid to another account. If a standing order is not updated in the cash book, it can cause discrepancies. The bank will reflect the deduction, but if it's not recorded, the cash book balance will be higher than the bank statement.
6. **Dividend:** Dividend payments received from investments or shares might be credited directly by the bank without being immediately recorded in the company's cash book. This can lead to discrepancies where the bank statement shows a higher balance than the cash book.
7. **Credit transfer:** This refers to money transferred directly into the company's bank account from another account. If the company doesn't record this transfer in their cash book, it leads to a higher bank balance in the statement compared to the cash book.
8. **Errors by the bank:** Mistakes made by the bank in processing transactions or recording them can result in differences between the cash book and the bank statement. These errors might lead to discrepancies in the balances of both records, requiring clarification and correction.
9. **Direct Debit:** Direct debits are automatic payments authorized by the company to be withdrawn directly from their bank account by a third party. If the company fails to update their cash book with these automatic withdrawals, it results in discrepancies. The bank statement will show reduced balances due to these withdrawals, but the cash book won't reflect this deduction, causing a higher cash book balance compared to the bank statement.
10. **Undercasting and Overcasting:** Undercasting occurs when transactions are recorded at a lower value than the actual amount, while overcasting happens when transactions are recorded at a higher value. Both undercasting and overcasting lead to discrepancies between the cash book and the bank statement. If these errors aren't identified and rectified, they can cause mismatches in the balances of the two records. It's vital to thoroughly review and cross-check transactions to rectify these discrepancies and ensure accuracy in financial records.

PREPARATION OF BANK RECONCILIATION STATEMENTS

The bank reconciliation statement can be prepared from two different perspective:

- Preparation of only the bank reconciliation statement
- Preparation of the; adjusted cashbook and the preparation of the bank statement using the balance of the adjusted cashbook.

METHOD A: PREPARATION OF ONLY THE BANK RECONCILIATION STATEMENT

Under this method, only the reconciliation will be prepared. We can start with either the cashbook balance or bank statement balance. There will be no adjustment of the cash book. If the cashbook balance is to be used, then unpresented cheques, credit transfers, dividends will be added while bank charges, standing orders, bank commission etc will be deducted to give us the balance as per bank statement.

Format of bank reconciliation statement when starting with balance of cash book:

	N	N
Balance as per cashbook		xx
Add: Unpresented cheque	xx	
Credit transfers	xx	
Dividend	xx	
Under-casting of the receipt side of the cashbook	<u>xx</u>	<u>xx</u>
Less: Uncredited cheque	xx	
Bank charges	xx	
Bank commission	xx	
Standing order	xx	
Dishonored cheque	xx	
Overcasting of the receipt side of CB	<u>xx</u>	<u>xx</u>
Balance as per bank statement		<u>xx</u>

Format of bank reconciliation statement when starting with balance of bank statement:

	N	N
Balance as per bank statement		xx
Add: Uncredited cheque	xx	
Bank charges	xx	
Standing order	xx	

Dishonored cheque	xx	
Overcasting of the receipt side of CB	xx	
Direct debits	<u>xx</u>	<u>xx</u>
		<u>Xx</u>
Less: Unpresented cheque	xx	
Credit transfer	xx	
Dividends	xx	
Under-casting of the receipt side of the cashbook	<u>xx</u>	<u>xx</u>
Balance as per cashbook		<u>xx</u>

Note: The balance arrived at, must be equal to the balance of the cashbook for that period.

Illustration:

- On the 31st March, 2022, Suleiman's cashbook showed a debit balance of ₦2,000. His bank statement showed a balance of ₦2,270. On comparison, the following were found.
 - Cheques drawn amounting to ₦1,500 had not been presented for payment
 - A standing order of ₦600 to a club was not taken into consideration
 - Bank charges of ₦50 were entered into the bank statement only
 - A dividend of ₦300 was paid directly into the bank statement only
 - Cheques for ₦1,000 were entered into the cash book and paid to the bank but had not been cleared and thus not credited
 - A customer, Majiddadi paid ₦120 directly into the bank without notifying the firm.

DEPRECIATION OF FIXED ASSETS

Fixed assets are assets that are permanent in nature and they create revenue for the business. They can last for a long period of time. Fixed assets of a business lose value or are said to depreciate with usage. Depreciation can be defined as a reduction in the economic value and service potential of an asset as a result of wear/tear, usage and passage of time. It can also be defined as the permanent and continuous decrease in the quality, quantity and value of an asset.

CAUSES OF DEPRECIATION

- Wear and Tear:** This occurs when an asset undergoes physical deterioration or damage due to its regular use or exposure to the elements. Example: A delivery truck might experience wear and tear on its tires, engine, and other components as it is driven over time.
- Obsolescence:** Obsolescence refers to a reduction in the value of an asset due to changes in technology, market preferences, or other factors that make the asset less competitive or outdated. Example: A computer system may become obsolete as new and more advanced technology emerges, reducing its value in the market.
- Passage of Time:** The mere passage of time can lead to a decline in the value of certain assets, even if they are not actively used or experiencing wear and tear. This is often

called "time decay". Example: Buildings and structures may gradually depreciate in value over time due to factors such as weathering, aging, and exposure to the environment.

4. **Depletion:** Depletion applies mainly to natural resources and refers to the reduction in the value of an asset as it is used or consumed. Example: An oil well's value may decrease as oil is extracted from it, leading to the depletion of the resource and a corresponding reduction in the well's value.
5. **Inadequacy:** Inadequacy depreciation occurs when an asset becomes inadequate or insufficient for its originally intended use due to changes in production methods, capacity requirements, or other operational needs. Example: A manufacturing plant may experience inadequacy depreciation if it cannot keep up with increased production demands, making it less suitable for the company's needs.

METHODS OF CALCULATING DEPRECIATION

1. **Straight Line Method:** This is the simplest and most commonly used method. It allocates an equal amount of depreciation expense each year over the asset's useful life.

Formula: $\text{Depreciation Expense} = (\text{Cost} - \text{Residual Value}) / \text{Useful Life}$

2. **Reducing Balance Method:** Also known as the declining balance method, it applies a constant rate of depreciation to the remaining book value of the asset each year.

Formula: $\text{Depreciation Expense} = \text{Book Value at the Beginning of the Year} \times \text{Depreciation Rate}$

3. **Annuity Method:** This method assumes that the asset generates a constant annual benefit, and depreciation is calculated as a fixed annual amount.

Formula: $\text{Depreciation Expense} = (\text{Cost} - \text{Residual Value}) / \text{Useful Life}$

4. **Sinking Fund Method:** In this method, a sinking fund is created by setting aside money regularly to replace the asset at the end of its useful life.

Formula: $\text{Annual Contribution to Sinking Fund} = (\text{Cost} - \text{Residual Value}) / \text{Number of Years}$

5. **Retirement and Replacement Method:** This method involves estimating the cost of replacing the asset at the end of its useful life and spreading this replacement cost over the asset's life.

Formula: $\text{Depreciation Expense} = (\text{Cost} - \text{Estimated Replacement Cost}) / \text{Useful Life}$

6. **Sum of the Year Digit Method:** This method accelerates depreciation by assigning more depreciation in the early years and less in the later years.

Formula: $\text{Depreciation Expense} = (\text{Remaining Useful Life} / \text{Sum of the Years' Digits}) \times (\text{Cost} - \text{Residual Value})$

7. **Depletion Unit Method:** Primarily used for natural resources, it allocates depreciation based on the number of units extracted or consumed.

Formula: $\text{Depreciation Expense per Unit} = (\text{Cost} - \text{Residual Value}) / \text{Total Units of Production}$

8. **Insurance Policy System:** Under this method, the cost of the asset is spread over the term of an insurance policy that covers the asset.

Formula: $\text{Depreciation Expense} = (\text{Cost of Insurance Policy} / \text{Useful Life of Policy})$

9. **Revaluation Method:** This method involves periodically reassessing the value of an asset and adjusting its book value accordingly.

Formula: $\text{Adjusted Book Value} = \text{Original Cost} + \text{Revaluation Increase} - \text{Revaluation Decrease}$

STOCK VALUATION

Stock valuation means putting an acceptable value of stocks of goods at hand either for the purpose of issuing such stock for production or sale or for disclosing such stock in the financial statement.

However, in financial accounting the cost is computed using three (3) different method:

- i. First in First Out (FIFO)
- ii. Last in First Out (LIFO)
- iii. Weighted Average

FIFO Method (First-In, First-Out) of Stock Valuation:

The FIFO method assumes that the first units of inventory purchased or produced are the first to be sold. In other words, it follows the chronological order of stock movements, and the cost of the earliest acquired inventory is matched with the revenue from the earliest sales.

Advantages of FIFO

- i. **Simplicity:** FIFO is straightforward and easy to understand. It aligns with the natural flow of inventory in many businesses.
- ii. **Accuracy in Matching Costs:** FIFO tends to result in a better matching of current costs with current revenues. This can be particularly useful in industries where the cost of inventory fluctuates significantly.
- iii. **Tax Benefits:** During periods of inflation, using FIFO can result in lower reported profits and, consequently, lower income tax expenses.
- iv. **Realistic Valuation of Inventory:** FIFO often provides a more realistic valuation of the ending inventory because it reflects the cost of the most recently acquired goods.

Disadvantages of FIFO

- i. **Distorted Profit in Inflationary Periods:** While FIFO can provide tax benefits during inflation, it can distort the reported profit and result in higher net income compared to other inventory valuation methods.
- ii. **Complex Record-Keeping:** Despite being simpler than other methods, FIFO can still require careful record-keeping, especially in businesses with a high volume of inventory transactions.
- iii. **Potential for Manipulation:** There's a potential for manipulation if a company intentionally uses FIFO or changes its inventory accounting method to achieve specific financial reporting objectives.
- iv. **Mismatch with Physical Flow:** In certain industries or situations, the actual flow of goods may not align with the chronological order assumed by FIFO. This can lead to discrepancies between the reported and physical flow of inventory.
- v. **Higher Tax Payments in Deflationary Periods:** In periods of deflation, FIFO can result

in higher reported profits and, consequently, higher income tax expenses.

LIFO Method (Last-In, First-Out) of Stock Valuation

The LIFO method assumes that the last units of inventory purchased or produced are the first to be sold. In other words, it follows the reverse chronological order of stock movements, and the cost of the most recently acquired inventory is matched with the revenue from the earliest sales.

Advantages of LIFO

- i. **Tax Benefits in Inflationary Periods:** LIFO often results in lower reported profits during periods of inflation, leading to lower income tax expenses. This is because the cost of the most recently acquired inventory (which is higher due to inflation) is matched with revenue.
- ii. **Matching Costs with Revenues:** In situations where prices are rising, LIFO can provide a more accurate matching of costs with revenues. This is because it reflects the higher current costs in the cost of goods sold.
- iii. **Realistic Valuation of Inventory:** LIFO can provide a more realistic valuation of the ending inventory during periods of rising costs since it values inventory at current replacement costs.

Disadvantages of LIFO

- i. **Complex Record-Keeping:** LIFO requires more complex record-keeping compared to FIFO. The accounting system needs to track the specific costs associated with each inventory layer.
- ii. **Distorted Profit in Non-Inflationary or Deflationary Periods:** In periods of stable prices or deflation, LIFO can result in distorted profits, as the cost assigned to COGS may be higher than the current replacement cost of inventory.
- iii. **Inventory Valuation Issues:** LIFO can lead to inventory valuation issues because the ending inventory is valued at older, potentially outdated, costs.
- iv. **Non-Conformity with Physical Flow:** The assumption of selling the most recently acquired goods first may not match the physical flow of inventory in certain industries or businesses.
- v. **International Accounting Standards:** LIFO is not allowed under International Financial Reporting Standards (IFRS), which can be a disadvantage for companies operating globally.
- vi. **Potential Erosion of Shareholder Value:** Because LIFO can result in lower reported profits, it might impact a company's market value and shareholder wealth.

Weighted Average Method of Stock Valuation

The weighted average method calculates the average cost of inventory by dividing the total cost of goods available for sale by the total number of units available for sale. This method assumes that all units, whether beginning inventory or purchased during the accounting period, are mixed together.

Advantages of Weighted Average Method

- i. **Simplicity:** The weighted average method is relatively simple to calculate and understand compared to other methods like LIFO or FIFO.
- ii. **Smooths Fluctuations:** It tends to smooth out fluctuations in the cost of inventory, providing a stable and consistent cost that is not overly influenced by the cost of the

- most recent purchases.
- iii. Convenience for Homogeneous Goods: It is particularly convenient when the inventory consists of homogenous items that are interchangeable.
- iv. Reduced Volatility: The weighted average method can result in a cost that is less volatile compared to LIFO or FIFO, which can be advantageous for businesses with fluctuating purchase costs.

Disadvantages of Weighted Average Method

- i. Loss of Specificity: Since it averages costs, it may not reflect the actual cost of the most recently acquired inventory. This can be a drawback in industries where the uniqueness of each unit matters.
- ii. Potential for Distorted Margins: In periods of significant price fluctuations, the weighted average method can lead to distorted gross profit margins, as it does not distinguish between older and newer inventory costs.
- iii. Impact of Extreme Costs: If there are extreme variations in the costs of items in stock, the weighted average may not accurately represent the actual cost of most units.
- iv. Tax Disadvantages: It may not provide the same tax advantages as LIFO during periods of rising prices since it doesn't specifically match the current cost with revenue.
- v. Incompatibility with Specific Identification: The weighted average method is not compatible with the specific identification method, where each unit is individually costed.

Illustration:

From the data below, illustrate the application of FIFO and LIFO method of pricing material.

1/1/2017	Opening Stock 500units @ ₦20 each
2/1/2017	Issues of production 3000 units
6/1/2017	Receipts of 1600 units @ ₦22 each\
16/1/2017	Issues to production 3000 units
20/1/2017	Receipts of 1800 units @ ₦25 each

FINAL ACCOUNTS OF A SOLE PROPRIETORSHIP

Final accounts of a sole trader refer to the financial statements prepared at the end of an accounting period to summarize the financial performance and position of the business. These accounts serve as a crucial tool for assessing the profitability and financial health of the sole proprietorship. The final accounts typically consist of three main components: the trading account, the profit and loss account (income statement), and the balance sheet.

Trading Account

The trading account is the first part of the final accounts and is designed to determine the gross profit or loss of the business. It starts with the opening stock (value of goods at the beginning of the accounting period) and adds purchases during the period. Direct expenses like carriage inwards and direct wages are added to the purchases to arrive at the total cost of goods available for sale. The closing stock (value of goods at the end of the accounting period) is subtracted from the total cost, resulting in the gross profit or loss.

Profit and Loss Account (Income Statement)

The profit and loss account follows the trading account and focuses on indirect expenses and revenues to ascertain the net profit or loss. It starts with the gross profit or loss from the trading account and adds other operating revenues, such as sales of assets or interest earned. Indirect expenses like rent, salaries, and utilities are deducted from the total, resulting in the net profit or loss for the period.

Balance Sheet

The balance sheet is the final component of the final accounts and provides a snapshot of the business's financial position at a specific point in time.

It consists of two main sections: assets and liabilities. Assets include current assets (e.g., cash, accounts receivable, inventory) and fixed assets (e.g., property, equipment). Liabilities encompass current liabilities (e.g., accounts payable, short-term loans) and long-term liabilities (e.g., long-term loans).

The balance sheet follows the accounting equation: Assets = Liabilities + Owner's Equity. The owner's equity represents the proprietor's interest in the business, calculated as the opening capital plus net profit (or minus net loss) from the profit and loss account.
