

CorelDraw

What is a CorelDraw?

This is a vector graphic software specifically designed for professional graphic designers and artist which can be use to design intuitive graphics models and artwork like greeting cards, wedding cards, posters, logos, book covers, etc both in 2D or 3D form. It works perfectly in windows environment. It developed and marketed by Alludo (formally corel coporation).

Lunching Corel Draw

Provided the CorelDraw 11 is installed on your system.

1. Click on start on the taskbar.
2. Point to all program.
3. Point to CorelDraw graphic suit 11.
4. Click CorelDraw 11.

Alternatively, if the CorelDraw shortcut icon is displayed on the desktop double click on it. Or use the search bar to search for the app. The CorelDraw opening dialog box appears as follow with six (6) options.

- i. New Graphic,
- ii. Open Last Edited,
- iii. Open Graphic,
- iv. Template,
- v. Corel TUTOR,
- vi. What's New?

You can choose any option depending on what you want to do. The description of each of the options is highlighted below.

CorelDraw opening Dialog box

CorelDraw

CorelDraw Opening Dialogue Box Options

New Graphic: This will allow you to open a new template or new plane environment which makes you to design and create new document.

Open Last Edited: This will make you to open or retrieve last document designed.

Open Graphic: This open graphic will allow you to open your own graphic saved in Corel Draw or any other graphic you may like to open.

Template: This is another way of opening arranged template for easy usage. In clicking on this, different dimension of templates will appear which will later allow you to select one out of them.

Corel TUTOR: This will help you to learn more about Corel Draw.

What's New?: This shows the types of Corel Draw you are working on, the version and the copyright. Etc.

To start a new project double Click on New graphic icon on the initial dialog box displayed. The CorelDraw screen appears. As follows

The Corel Draw screen

CorelDraw

Part of Corel Draw Screen

Menu bar: The area containing pull-down menu options

Property bar: A detachable bar with commands that relate to the active tool or object. For example, when the text tool is active, the text property bar displays commands that create and edit text.

Standard Toolbar: A detachable bar that contains shortcuts to menu and other commands

Title bar: The area displaying the title of the currently open drawing

Rulers: Horizontal and vertical borders used to determine the size and position of objects.

Toolbox: A floating bar with tools for creating, filling, and modifying objects in the drawing

Drawing window: The area outside the drawing page bordered by the scroll bars and application controls.

CorelDraw

Drawing page: This is the rectangular area inside the drawing window. It is the printable area of your work document.

Color palette (Windows) A dockable bar that contains colors, A free floating bar that contains the current color mode.

Status bar: An area at the bottom of the application window that contains information about object properties such as type, size, color, fill, and resolution. The status bars also show the current mouse position.

Different typefaces

A typeface consists of characters of a very specific type. Within each type face a character can have different sizes and styles. A font defines a specific character size and styles.

There are two categories of typefaces in CorelDraw

- Serif and Sans Serif Typeface.

Before identifying the first category of type, it is important to have a good understanding of the terms serif and sans serif. Serifs are letters that have a small (or sometimes large) horizontal stroke on the ends of letters. Sans serifs are letters created without this additional stroke.

Serifs and **sans serifs** are broken into different type categories. **Sans serifs** are rather simple to identify.

Serifs are further divided into four categories –

- old style.
- Modern.
- Transitional.
- square or slab.

CorelDraw

Serif fonts are most commonly used in print publishing. **Sans serifs** are the standard for digital design. Sans serifs tend to be preferred online because serifs and alternating thick and thin strokes can be hard to render well on screens, especially at small sizes. In digital and web applications serifs are most often used for large-sized type. Sans serifs are used from the smallest of typefaces to the largest with ease.

SOME CORELDRAW TERMINOLOGIES

Before you continue working with CorelDraw, you should be familiar with the following terms.

Object- An element in a drawing such as an image, shape, line, text, curve, symbol, or layer.

Drawing- The work you create in CorelDraw: for example, custom artwork, logos, posters, and newsletters

Vector Graphic An image generated from mathematical descriptions that determine the position, length, and direction in which lines are drawn.

Bitmap- An image composed of grids of pixels or dots

Docked wdw/palette A window containing available commands and settings relevant to a specific tool or task.

Flyout- A button that opens a group of related tools or menu items

Artistic text A type of text to which you can apply special effects, such as shadows

Paragraph Text A type of text to which you can apply formatting options, and which can be edited in large blocks

FLYOUTS

Flyout is a tool that opens or display a set of related CorelDraw tools. A small arrow in the bottom right-hand corner of a toolbox button indicates a flyout: for example, the Shape edits flyout. Clicking a flyout arrow opens a set of related tools. Clicking and dragging the grab handles at the end of the flyout sets the flyout in its expanded form.

CorelDraw

The following table provides descriptions of the flyouts and tools in the CorelDraw

Pick tool: The Pick tool lets you select, size, skew, and rotate objects.

Shape edit: This is used to access the Shape, Knife, Eraser, Smudge brush, Roughen brush, and Free transform tools

Zoom :- This is used to access the Zoom and Hand tools

Curve:- This is used to access the Freehand, Bezier, Artistic media, Polyline, **Pen**, 3 point curve, Dimension, and Interactive connector tools

Rectangle:-This is used to access the Rectangle and 3 point rectangle tools

Ellipse:- This is used to access the Ellipse and 3 point ellipse tools

Object:- This allows you to access the Graph paper, Polygon, and Spiral tools

Perfect Shapes: - This allows you to access the Basic shapes, Arrow shapes, Flowchart shapes, Star shapes, and Callout shapes tools

Interactive tools:- This is used to access the Interactive blend, Interactive contour, Interactive distortion, Interactive envelope, Interactive extrude, Interactive drop shadow, and Interactive transparency tools

Eyedropper:-This is used to access the Eyedropper and Paint bucket tools

Outline:- This allows you to access the Color Dockers window/palette, Outline pen and the Outline color dialog boxes, and a selection of outlines of various widths

Fill:- This allows you to access the Color Docked window/palette, Fill Color, Fountain fill, Pattern fill, Texture fill, and Postscripts fill, dialog boxes

Interactive fill:- This is used to access Interactive fill and Interactive mesh fill tools.

The **Bézier** tool lets you draw curves one segment at a time.

The **Pen** tool lets you draw curves one segment at a time.

The **Polyline** tool lets you draw lines and curves in preview mode.

The **Smart** drawing tool converts your freehand strokes to basic shapes and smoothed curves.

Artistic media provides access to the **Preset**, **Brush**, **Sprayer**, **Calligraphic**, and **Expression** tools.

The **Polygon** tool lets you draw symmetrical polygons and stars.

The **Graph paper** tool lets you draw a grid of lines similar to that on graph paper.

CorelDraw

CorelDraw

DRAWING BASIC SHAPES IN CORELDRAW

- i. To draw a rectangle or a square by dragging diagonally.
- ii. Open the rectangle flyout and click the rectangle tool.
- iii. Drag in the drawing window until the rectangle is the size you want.

A square: Open the rectangle flyout and click the rectangle tool. Hold down Ctrl or shift and drag the drawing window until the square is the size you want.

To draw an ellipse or a circle

- i. Open the ellipse Flyout
- ii. click the ellipse tool.
- iii. Drag in the drawing window diagonally until the ellipse is the shape you want.

To Draw a Polygon

- i. Click on the polygon tool in the toolbox located on the left side of the page.
- ii. It can be found on the Toolbox, located by default below the Ellipse tools.
- iii. The property bar displays the default **outline width** and **line style** for all graphic elements, which can be changed for a polygon once it's created. You can also **set** the no of polygon sides.
- iv. Drag in the drawing window until the polygon is the size you want.

To Draw a star

- i. Open the Shape flyout in the toolbox.
- ii. click the star tool. 
- iii. Drag in the drawing window until the star is the size you want.

CorelDraw

- To draw a star from its center, hold the Shift key while dragging the mouse.
- To draw a star with all sides equal, hold Ctrl key while dragging the mouse.
- To draw an equal-sided star from its center, hold both the Shift key and Ctrl/Cmd key while dragging the mouse.

Modifying your shapes

CorelDraw let you draw basic shapes which you can modify using special effects and reshaping tools.

1. Open Corel DRAW.
2. Draw the outline of the basic shape using **Bazier Tool**.

3. Edit the basic shape using **Shape Tool** with Node Edit Options.

4. Create the offset shape inside the original shape using **Interactive Contour Tool**.
5. Fill it with Golden shade using **Fountain Fill > Preset**

6. Make different shapes according to requirement.

7. Use Shift + Pick Tool and Right click to get the smaller copies. You can try **Interactive Contour Tool**.

CorelDraw

8. Try the combination of the shapes.

9. After filling the golden shade, change the direction of the fill by shifting the arrow using

Interactive Fill Tool.

10. Place the shapes in a proper symmetry

How to exit CorelDraw

1. Save and close all opened project
2. Click on file
3. Click exit

To import a file into an active drawing

- 1 Click File, Import.
- 2 Choose the folder where the file is stored.
- 3 Choose a file format from the Files of type list box or Show list box.
- 4 Click the Filename.
- 5 Enable any of the following active check boxes:
 - ❖ Link bitmap externally lets you link a bitmap externally instead of embedding it in a file
 - ❖ ·Combine multi-layer bitmap automatically merges the layers within a bitmap
 - ❖ Check for watermark lets you check the image for a watermark and any information it contains, such as copyright

CorelDraw

- ❖ ·Do not show filter dialog, lets you use the filter's default settings without opening its dialog box
- ❖ ·Maintain layers and pages lets you maintain layers and pages when importing files; if you disable the check box, all layers are combined in a single layer.

6 Click Import.

7 Click the drawing page.

Exporting files

You can export and save images to a variety of file formats that can be used in other applications. You can export a file to a selected file format. You can also export a file by saving the open file under a different name or to a different file format while To export a file

1 Click File Export.

2 Choose the folder where you want to save the file.

3 Choose a file format from the Files of type list box .

4 Type a filename in the File name list box .

5 Enable any of the following active check boxes:

- ❖ Selected only saves , only the objects selected in the active drawing.
- ❖ Web_safe_filenames replaces the white space in a filename with an underscore.
- ❖ Special characters are replaced by characters suitable for Web-based filenames.
- ❖ Do not show filter dialog suppresses dialog boxes that provide other options when exporting

6 Click Export.

File Format for Corel Draw.

Corel Draw Support file .Cdr extension, Its native file format is generally found in .cdr files but other extensions exist for variants of it. The format has gone through several major revisions over the years.

SELECTING AN OBJECT

1. Click on the pick tool in the tool bar

2. Click inside if the object is filled or outline of the object if not filled. The object is selected select multiple object by Holding down the shift key, continuing clicking on each of the objects to be selected.

MARGUEE SELECTED OBJECTS

1. Click the pick tool

2. Hold down the mouse button and drag the dotted rectangle (Margue box) to completely cover the object you want to select.

CorelDraw

3. Release the mouse button if you are through, the objects covered are selected.

WORKING WITH TEXT

CorelDraw allows you to create and manipulate text with ease. Text can be entered directly on the screen as a string of artistic text or block of paragraph.

Corel draw 11 can be used for page layout of over 900 pages of document at a time. You only open a page and keep inserting the rest pages.

TO ADD ARTISTIC TEXT

1. Select the **Text tool (A)**
2. Click on the spot where you want the text to begin
3. Type the text, You can change the font, font size, font style **boldface**, **underline**, **italicize** and set other character attributes

ADDING SYMBOLS

Corel draw has a symbol library that contains a collection of predrawn graphics symbols relating to business, transportation, sports celebration etc. To add symbol

1. Click on the symbol button, the menu appears
2. Select the category you want. Then click directly on the picture you want and drag it to anywhere on the page.

STRETCHING, SCALING AN OBJECT

1. Select the object
2. Move the pointer to one of the handles between the corners to stretch, or scale. The pointer becomes a cross
3. Drag the handle in the desired direction
4. Release the mouse button when you are satisfied with the size.

ROTATE AN OBJECT

1. Double click on the object you want to rotate. The handles on the object highlighted box change to a double – handed arrows
2. Move pointer over one of the corner arrows, until it becomes a cross
3. Drag in a circular motion around the object
4. Release the mouse button when you are satisfied with the rotation.

TO MOVE AN OBJECT OR TEXT

CorelDraw

1. Click on the object or on the block of TEXT a little black boxes is shown at all corners of the object or text
2. Click and drag the object to the desired destination, then release your hand.

FILLING OBJECT WITH COLOUR

1. Select the object.
2. Click fill tool.
3. Click the colour you want.
4. Increase the shadow between 10% to 90% alternatively.
From the on-screen colour palette select the colour you want.

CREATING A FOUNTAIN FILL

A fountain fill flows from one colour to another either on a straight line across an object or in concentric circles from the Centre of an object. To do this;

1. Select the object you want to fill
2. Select the fill tool
3. Click on fountain fill icon
4. Choose either linear or random fountain type
5. Click on the colour button, then on the colour you want as a start colour
6. Click on the colour button and then on the colour you want as you want, then click OK.

How to Scan Pictures

To scan picture or other drawing or images, follow the steps below.

- i. Put the picture on the scanner glass area appropriately and close the scanner cover.
- ii. On the Corel draw screen click file.
- iii. Select acquired image, select source, the select source windows is display.
- iv. Select scanner and click 'select'(Wait seconds, the picture is scanned and displayed on the screen)
- v. Adjust and manipulate the picture as necessary as possible.
- vi. Put other artistic work text etc until you are satisfied with your designs.

ADDING TEXTURE

1. Open Corel DRAW. Select text tool and type the text preferably using thick font. We have used Impact.

CorelDraw

Note: It is expected that you have finished with the beginners projects when you start with intermediate, as we do not repeat the small instructions.

2. Select Interactive Extrude Tool from the Flyout menu from the tool box. Its 10th from the top.
3. Create the 3D effect using Interactive Extrude Tool. Keep the text selected.
4. From the Property Bar at the top select Lighting.
5. Try out different options for lighting and create following effect.
6. From the Fountain Fill flyout menu select the Texture Fill Dialog.
7. Apply the desired texture to the text.
